#### **NCCCOFOUNDATION** Industry Forum

#### What's New at Federal OSHA? Certification, Evaluation and More

Scott Ketcham, Director, OSHA Directorate of Construction

October 29, 2020

### Construction Update

Scott C. Ketcham MPA, CSP Director, Directorate of Construction Occupational Safety and Health Administration

### Agenda

- Directorate of Construction
- Engineering incident investigation
- Focus Four
- Regulatory Update
- Inspection Statistics
- Crane Operator Qualification
- Opioids/Suicide in Construction
- Fall Stand Down
- COVID-19

- <u>OCS (Construction Services)</u>: Field enforcement assistance, Compliance Assistance, Interpretations, ACCSH
- <u>OCSG (Construction Standards and Guidance)</u>: Develop and promulgate Construction standards; Directives; Interpretations and other guidance products
- <u>OES (Engineering Services)</u>: Forensic engineering analysis, Structural and Geotechnical Assistance

#### Catastrophe Incident Investigations

- Bridges
- Cranes
- Communication Towers
- Excavation and Trenching
- Formwork and Scaffolds
- Industrial Buildings (Steel, Concrete, Masonry)
- Mast Climbing Platforms
- Parking Garages
- Trusses (Steel and Timber)
- Demolitions

### 2018: Investigation of the Collapse of a Lattice Boom Crawler Crane

- Construction of a new wastewater treatment facility
  - Two employees on a scaffold
  - Installing wooden roof trusses
  - Lattice boom crawler crane hoisting wooden roof trusses
- Crane boom hoist wire rope failed when lifting four half wooden roof trusses, resulting in the boom falling and striking two employees on scaffolding
- One employee was killed, another was injured

#### **Boom Hoist Line**

#### **OSHA's** Findings

- Incident was caused by the *failure of the boom hoist wire rope due to fatigue, an extensive number of wires of the exterior stands of the* wire rope had fractured
- Crane operator and the contractor's technicians did not properly inspect the crane's boom hoist wire rope during the shift and monthly inspections in accordance with the OSHA standard 1926.1413(a)(3)(ii)

#### OSHA's Findings Cont.

- The contractor failed to document its monthly inspections of the crane and its wire ropes in accordance with OSHA standards 26 CFR 1926.1412(e)(3) and 1926.1413(b)(4)
- Metallurgical examination of the failed wire rope indicated that the extent of breaks were due to *extensive and numerous fatigue failures*, that could have been noticed during proper shift inspections

#### OSHA's Findings Cont.

- Contractor did not correct deficiencies raised by the third-party inspector during the annual inspection a few months before the incident
- Contractor was using slings and hooks that were damaged that should have been pulled from service

#### **Construction Focus Four**

The actual breakdown of the causes of fatalities on construction sites in 2018 is as follows (numbers are a percentage of the 1,008 total construction-related fatalities that occurred in 2018):

- Falls: 338 (33.5%)
- Struck by object: 112 (11.1%)
- Electrocutions: 86 (8.5%)
- Caught in/between: 55 (5.5%)

### **Construction Fatal Fall Incidents**

#### **Fatal Fall Incidents in Construction (323)**

Type of Construction	<u>Number</u>	<u>Percent</u>
Roofing	77	23%
Residential Building	67	20%
Plumbing and HVAC	24	7%
Nonresidential Building	20	6%
Painting and Wall Covering	17	5%
Heavy and Civil Engineering	16	5%
Electrical	15	5%

### **Construction Fatal Struck-by Incidents**

Struck By Incidents in Construction (112)				
	<u>Number</u>	Percent		
Struck by falling object or equipmentother than powered vehicle (66)				
<ul> <li>Struck by object falling from vehicle or machinery other than vehicle part</li> </ul>	29	26%		
Struck by powered vehiclenontransport (26)				
<ul> <li>Struck by falling part of powered vehicle still attached</li> </ul>	7	6%		
<ul> <li>Struck by swinging part of powered vehicle</li> </ul>	6	5%		
<ul> <li>Struck or run over by rolling powered vehicle</li> </ul>	5	4%		

### **Construction Fatal Electrocution Incidents**

Electrocution Incidents in Construction (86)				
	<u>Number</u>	Percent		
Direct Exposure to electricity (49)				
Greater than 220 volts	28	33%		
220 volts or less	12	14%		
Indirect exposure to electricity (37)				
Greater than 220 volts	33	38%		
220 volts or less	4	5%		

## Construction Fatal Caught-in/Between Incidents

#### **Caught in/Between Incidents in Construction (55)**

	<u>Number</u>	<u>Percent</u>
Struck, caught, or crushed in collapsing structure, equipment, or material (35)		
<ul> <li>Struck, caught, or crushed in other collapsing structure or equipment</li> </ul>	19	35%
Excavation or trenching cave-in	14	25%
Caught in or compressed by equipment or objects (20)		
<ul> <li>Caught in running equipment or machinery</li> </ul>	11	20%
<ul> <li>Struck, caught, or crushed in other collapsing structure or equipment</li> <li>Excavation or trenching cave-in</li> <li>Caught in or compressed by equipment or objects (20)</li> <li>Caught in running equipment or machinery</li> </ul>	19 14 11	35 25 20

### **Construction Regulatory** Activities

- Tech Corrections Issued in February
- Railroad Cranes Final Rule in effect
- Crane Amendments NPRM Clearance
- Communication Towers NPRM
- Welding in Confined Spaces NPRM
- PPE in Construction NPRM
- Powered Industrial Trucks NPRM (ACCSH)
- Hazard Communication NPRM

## Crane Operator Qualification & Certification

### Background

Subpart CC - Cranes and Derricks in Construction

• Required certification by type and capacity and retained employer duty

#### Post-Rulemaking Concerns

- Industry stakeholders said certification by capacity unnecessary and employer should play role in operator competency
- OSHA reached out to industry to gather information

**Operator Qualification Rulemaking** 

- Proposed rule published May 18, 2018
- Final Rule published November 9, 2018

### General Requirements

- Employers must ensure operators are trained, certified/licensed, & evaluated
- Any operator not certified/licensed & evaluated is an operator-in-training
- Operators of derricks, sideboom cranes, & equipment less than 2000 lbs. are excluded
- US military employees with qualifications from the military meet these requirements

### **Operator Training**

- Employers must provide training to operators-in-training to ensure they have the skills, knowledge, and ability to recognize and avert risk
- Trainer must be an employee or agent of the operator-in-training's employer
- Operators-in-training must be continuously monitored
- Operators must be retrained when the operators performance or knowledge indicates it is necessary

Photo: Eastern Kentucky University

### **Operator Certification & Licensing**

- Employer must ensure that each operator is certified or licensed
- Some jurisdictions require operators to be licensed by a state or local government entity
- Certification/licensing must be provided at no cost to employees
- Testing entities can provide both training and testing

### Certification by Accredited Testing Organization

- For OSHA to consider an accredited testing organization certification to be valid, the organization must certain criteria
- If there is no certification available for a type of equipment, the operator must be certified on the most similar equipment
- A certification issued by an accredited testing organization is valid for 5years

### Audited Employer Program

- Employers certifying their own employees must certain requirements for:
  - Testing
  - Timing of audit
  - Requalification
  - Deficiencies
- Audited-program certificates are valid 5-years

### Evaluation

- Employers must evaluate an operator to ensure their continued ability to recognize and avert risk necessary to operate the equipment safely
- Evaluations must meet OSHA criteria
- Employer may allow the operator to operate other equipment of the same type that the employer can demonstrate does not require substantially different skills, knowledge, or ability to recognize & avert risk
- Operators employed prior to December 10, 2018, the employer may rely on its previous assessments of the operator instead of conducting a new evaluation

# Crane Directive Update and OSHA Outreach

- Amends the existing Cranes and Derricks Directive, CPL 02-01-057
- This directive does not create any new obligations on employers
- Provides OSHA enforcement personnel with guidance on conducting inspections and policy on citing violations of the standard
- Updated Small Entity Compliance Guide for the Final Rule for Cranes and Derricks in Construction
  - Will provide concise statement of crane operator training, certification, and evaluation requirements
  - Will answer frequently asked questions on certification testing and payment for certification

#### Telecommunication Tower Fatalities

- Total of 8 fatalities in 2019
- 2 fatalities in 2020 to date
- January 10, 2019 in Caputa, SD
  - 23-year-old employee climbed a 190' self-supporting tower to perform night work
  - Limited visibility and inadequate lighting
  - No safety plan for hazards encountered during night work
  - Employee fell while descending at the 180' level
  - Inadequate anchorage through use of an oversized carabiner hooked over a step bolt allowing it to slip off the end
  - Inadequate lighting & failure to provide and ensure fall protection use

#### Telecommunication Tower Standard Development

- Closely reviewing existing consensus standards
- Full list of potential topics which include fall protection, safe work practices, hoisting, rigging, and structural requirements for consideration can be found in SBAR panel documents (https://www.osha.gov/doc/comtowersbrefa.html)
- OSHA will continue to conduct research and reach out to stakeholders as the process continues

### **Construction Worker Suicides**

- Suicide Rates by Major Occupational Group 17 States, 2012 and 2015
  - From 2000 to 2016, the U.S. suicide rate among working aged (16–64 years) adults increased 34% from 12.9 per 100,000 population to 17.3
  - 2012 and 2015, largest percentage of male suicides (15%–16% of decedents) occurred among Construction and Extraction group
    - Highest male suicide rate (43.6 [2012] & 53.2 [2015] per 100,000)
- 102 workplace suicides in the private construction industry 2013-2017
  - 13 Construction managers
  - 21 First-line supervisor
  - 46 Construction trades workers
  - 40 Self-employed
  - 62 Wage and salary workers

- 36 Building construction
- 5 Heavy and civil engineering construction
- 55 Specialty trade contractors

Source: NIOSH

### **Construction Worker Suicides**

Suicide Rates by Occupational Group — 17 States, 2012 and 2015

- 2000 to 2016, the U.S. suicide rate among working aged (16–64 years) adults increased 34% from 12.9 per 100,000 population to 17.3
- 2012 and 2015, largest percentage of male suicides (15%–16% of decedents) occurred among Construction and Extraction group
- Highest male suicide rate (43.6 [2012] & 53.2 [2015] per 100,000)

102 Workplace Suicides in the Private Construction Industry 2013-2017

 13 Construction Managers, 21 First-line Supervisors, 5 Heavy & Civil Engineering Construction, 46 Construction Trades Workers, 55 Specialty Trade Contractors, 40 Self-employed, 62 Wage and Salary Workers, and 36 Building Construction Workers

#### Construction industry has one of the highest injury rates when compared to other industries

- Commonly prescribed to construction workers to treat the pain caused by these occupational injuries
- Overdose deaths occurred on the job increased by over 30% between 2015 and 2016
- OSHA supports NIOSH, and other stakeholders in sharing ideas

#### National Safety Stand-Down

To Prevent Falls in Construction

#### SEPTEMBER 14-18, 2020

- National Fall Stand-Down was a huge success with thousands of companies – large and small – participating across the U.S. and internationally
- Over 2,500 certificates issued reaching nearly 400,000 workers
- Certs still available

#### #StandDown4Safety

### Virtual/Small Group Stand-Downs

- COVID-19 Pandemic caused us to change the way we held the standdowns from years past
- OSHA encouraged employers to promote fall safety while holding stand-downs virtually or while employing social distancing practices among small groups

#### Protecting Workers from Risk of Exposure to COVID-19

- OSHA is coordinating closely with CDC, including NIOSH, and other federal agencies to monitor the ongoing pandemic
- OSHA's message is clear: Employers should have a plan for protecting workers and preventing further spread of disease while maintaining the employer's day-today functions

#### **Occupational Exposure Risks**

- Risk of exposure in many workplaces likely reflects the risk to the general public in the community where the workplace is located
- Risk increases when workers have frequent, close contact with the general public or other coworkers

Photo: Turner Construction Company

#### **OSHA** Guidance

- OSHA developed a variety of guidance materials for workers and employers on how to stay healthy during the pandemic
- OSHA.gov/coronavirus includes information on implementing the hierarchy of controls when workers have specific exposure risks

#### OSHA Guidance Cont.

- Helps employers comply with OSHA standards
- Based on anticipated hazards & risks, incorporates standards, contact, and airborne precautions, and use of face/eye protection.
- Should be adapted based on an employer's hazard assessment and workers' tasks.

Clockwise from L: public domain; WikimediaCommons; CDC/Kimberly Smith & Christine Ford

#### OSHA Guidance Cont.

For all workers, regardless of specific exposure risks:

- Practice good and frequent hand hygiene
- Follow good cough/sneeze etiquette
- Avoid touching the eyes, nose, or mouth with unwashed hands
- Avoid close contact with people who are sick

Photo: U.S. Department of Defense

#### **OSHA** Alerts

#### OSHA has developed alerts for:

- Stockroom and Loading Dock Workers
- Nursing Home and Long Term Care Facility Workers
- Retail Pharmacies
- Rideshare, Taxi, and Car Service Workers
- Dental Practitioners
- Restaurants & Beverage Vendors offering Takeout
- Construction Workers
- Package Delivery Workers
- Retail Workers
- Other risk and infection prevention topics

#### www.osha.gov/coronavirus

#### Prevent Worker Exposure to Coronavirus (COVID-19)

The novel coronavirus (officially called COVID-10) is believed to spread from person-to-person, primarily through respiratory droplets produced when an infected person cought or seeknes. The virus is also believed to spread by people couching a surface or object and then touching one's mouth, role, or possibly the eyes.

Employers and workers should follow these general practices to help prevent exposure to coronavirus:

- Frequently wash your hands with soap and water for at least 20 seconds
- If soap and running water are not available, use an alcohol-based hand rub that contains at least 50% alcohol.
- Avoid touching your eyes, nose, or mouth with unwashed hands

Avoid close contact with people who are sick.

Employers of workers with potential occupational exposures to coronavirus should follow these practices:

- Assess the hazards to which workers may be exposed
- Evaluate the risk of exposure.
- Select, implement, and ensure workers use controls to prevent exposure, including physical barriers to control the spread of the virus; social distancing; and appropriate personal protective equipment, hygiene, and cleaning supplies.

For the latest information on the symptoms, prevention, and treatment of coronavirus, visit the Centers for Oisease Control and Prevention coronavirus webpage.

For interim guidence and other resources on protecting workers from coronavirus, visit OSHA's COVID-19 webpage.

  - Construction
  - Health Care

#### Staying Safe During COVID-19

Remember to:

- Stay home if sick
- Wash hands with soap and water or alcohol-based hand rubs containing at least 60% alcohol
- Wear a face covering
- Continue social distancing
- Avoid sharing equipment and tools
